MEMORANDUM

DATE: 9/3/86

TO: Ms. June Sullens, Waste Management Program

FROM: *Bob* Bob Eck, Environmental Specialist IV  
Macon Regional Office

SUBJECT: Kewanee Machinery

This memo is to complete the information needed to close out the file on Kewanee Machinery - uncontrolled hazardous waste site 3712. On June 20, the Macon Regional Office received confirmation that the underground storage tanks had been emptied of solvent and sold and the tanks had been unearthed. A drive-by inspection of the property on July 9 confirmed the site clean-up had been completed.

Attached is a memo from Doug Bachman indicating the completion of work. If additional information is needed, please advise.

Return Balance to Corporate Safety & Loss Prevention Department  
120 S. Central Avenue  
St. Louis, Missouri 63105

Mr. Robert Morby  
May 28, 1987  
Page Two

The Department's St. Louis Regional Office (SLRO) inspected this site on February 27, 1987. The site had been cleaned up in June, 1986 in accordance with a remedial action plan and has now been graded and revegetated.

MOD980967541 Kewanee Machinery, 2806 Industrial Road, Kirksville

The PA narrative report for this site stated that an underground storage tank contained an unknown amount of 100% toluene and a second one was believed to be empty. The priority for inspection was "Low." On June 20, 1986, the Macon Regional Office (MRO) was notified by Mr. Doug Bachman, Kewanee Machinery, that the underground storage tanks had been emptied of solvent and removed. On July 9, 1986 the MRO confirmed the cleanup had been completed. At that time, the Department recommended that no further action be done at this site.

MOT300011160 Kiesel Company, Foot of Branch Street, St. Louis

The State's priority for inspection was "None" on EPA form 2070-12.

MOD980862213 Master Pest & Termite Control, 3760 Pennridge Drive, Bridgeton

Fifty pounds of outdated pesticides (DDT) is in secure storage at the Public Storage Management facility on Pennridge Drive. The small quantity of DDT is exempted from RCRA and state hazardous waste management regulation due to the small quantity exclusion. The State's priority for inspection in 1984 was "Medium," but the priority should be "None" since the waste is not regulated by RCRA due to its small quantity and its secure condition.

MOD082127184 Midway Mine, 1 mile west of Amsterdam

On form 2070-12, the State's priority for inspection was "None."

MOD980633507 Seidlitz Paints-Abandoned Warehouse, 1519 N. 18th Street, St. Louis (Also known to the State as Eighteenth Street Warehouse)

The tentative disposition submitted for this site stated that all hazardous waste had been removed from this site, but a final disposition would not be submitted until a cost recovery action was settled. In December, 1984, the State dropped its 1982 cost recovery referral to the Attorney General's Office, so a final disposition should now be completed for the site.

MOD000669127 Sinclair & Valentine, 523 Hanley Industrial Court, Brentwood

On form 2070-12, the State's priority for inspection was "None."
